This document was published at a total cost of ____ per copy for 12,500 copies, including all printings, by the Louisiana Department of Environmental Quality, P.O. Box 4301, Baton Rouge, LA 70821-4301, to provide the public with environmental information in accordance with La.R.S.30:2011, using standards for printing by state agencies established pursuant to La.R.S.43:31.

Printed on recycled paper. 

Notice to Readers: The Louisiana Environmental Update is published 4 times each year by the State of Louisiana, Department of Environmental Quality, to provide news and information of interest to the residents of Louisiana. Upon request, individuals or groups with 25 or more members will be placed on the mailing list of the Louisiana Environmental Update. If you wish to receive copies of this publication by mail, please contact the Communications Section at (225) 219-3960 or e-mail or write to the addresses provided above.

Message From the Secretary

If You Build It, They Will Come

Following the close of an activity-filled Legislative Session, the staff of the Louisiana Department of Environmental Quality (DEQ) completed their move downtown. The much-anticipated move finally took place on June 29, 2003. The move brought changes, more activity and a renewed commitment to serve the public but outreach and public access will remain our primary goal.

We have much to offer in our new location. Citizens are coming to DEQ to take advantage of our public records room and our public library located on the main floor. Frequent organized tours of the DEQ building and air laboratories, open houses and public forums in our new conference facilities have brought visitors from as far away as Nigeria. Everybody comes to DEQ!

The Communications Section (CommSec) staff are forging closer ties with the news media to allow us to promote a more complete picture of the Department and its mission. A recent article on the air laboratory on the Science and Technology page of *The Advocate* and coverage of the DEQ sponsored youth oriented **Rock the Ozone: The Concert for Clean Air** illustrates that news media are finding CommSec responsive to their needs and able to provide them with accurate information for their stories. Recently the members of CommSec and Public Records presented a joint exhibit at the Society of Environmental Journalists held in New Orleans. The objective was to demonstrate how the two sections work together to meet information needs.

The general public will be able to obtain an

environmental and visual understanding of their immediate surroundings with a new informational tool, Make-A-Map. It was released in late July. Through its Geographic Information System (GIS), DEQ became the first state environmental agency in the country to provide seamless high-resolution statewide digital orthoimagery map-making technology.

Earlier in the summer, the DEQ Criminal Investigation Section (CIS) regrouped. CIS concentrates its efforts on gathering evidence to put together cases for criminal prosecution and will act as an added deterrent to those who would willfully harm the environment.

In the midst of all these changes, our permit writers are meeting crucial permit commitments; our surveillance and enforcement teams, at headquarters and the regional offices, are busy inspecting facilities, responding to complaints and emergencies and insuring compliance with environmental regulations. Our remediation specialists travel across the state to ascertain proper clean up of contaminated sites. In addition, DEQ staff continues to provide environmental services and assessments such as evaluation, planning, technology and education.

To steal a phrase, "If you build it, they will come." Our new building is located at 602 N 5th Street. We look forward to your visit. 

L. Hall Bohlinger, Secretary
Louisiana Department of
Environmental Quality

With Alligators All Around Secretary Bohlinger Takes In Preservation Notions

The Secretary of the Louisiana Department of Environmental Quality (DEQ), Hall Bohlinger, listened to Frank Bonifay and Jim Rayland outlined their plans to enhance about 1,500 acres of the Spanish Lake Basin. Bonifay and Rayland are owners and operators of the Ascension parish based Alligator Bayou Tours.

As reported in the Baton Rouge daily *The Advocate*, Secretary Bohlinger visited the facility along with Mary Lee Orr, Executive Director of the Louisiana Environmental Action Network (LEAN) and other DEQ officials.

Since becoming Secretary of DEQ, Bohlinger

has visited various areas facing environmental challenges, such as residents of the Alsen community and the Myrtle Grove trailer park in Plaquemine. This time around, the Secretary was given a comprehensive look at preservation ideas such as increasing the alligator population and restoring historical water flow patterns to the swamp.

"I think it is really important to step out in the field, see things first hand and listen to different ideas and perspectives. By taking it all in, we become better equipped to deal with different issues, thus, enhancing our role as a state agency and increasing the value of service we provide to the public," said the Secretary. 

Staff of DEQ, Linda Korn-Levy, Assistant Secretary for the Office of Environmental Services, R. Bruce Hammatt, Assistant Secretary for the Office of Environmental Compliance, Hall Bohlinger, DEQ Secretary, Amy Wold, The Advocate and Mary Lee Orr, LEAN also watch as Jim Rayland, co-owner of Alligator Bayou Tours displays some large snapping turtles.

Everybody comes to DEQ

As part of the Agency's ongoing commitment to provide the highest level of service to the public, DEQ has welcomed many visitors to its new location. The \$35.7 million, 12-story Galvez Building houses more than 1,000 state employees. DEQ resides on floors one through 10. The building is also home to the Public Service Commission and the Division of Archaeology.

The Galvez Building is part of Capitol Park, a collection of new facilities that are being added to the historic structures situated around a campus of roughly 250 acres in downtown Baton Rouge. The building is named for Spaniard Bernardo de Galvez, one of Louisiana's most colorful governors, who drove the British from Baton Rouge in 1779 when Spain still owned most of the Louisiana territory.

Why does everybody want to come to DEQ? Whether, it is a summer bash, meeting, tour, or to view a public record, the Galvez offers something for everyone. The building houses new technology, research and educational materials and provides a variety of information. For easy access, the public library, public records room and a mail drop-off box are located on the main floor.

DEQ Secretary Hall Bohlinger, Deputy Secretary Bob Hannah, and the Communications Section had the opportunity to conduct several

tours of the new facility with groups that included, members of the Louisiana Chemical Association (LCA), Louisiana Environmental Action Network (LEAN), students and administrators from Tulane Environmental Law Clinic, members of the Governor's Task Force and Nigerian government oil industry regulators with the Department of Petroleum Resources (DPR).

Each tour group was treated to presentations by DEQ staff in the Geographic Information (GIS), public records, DEQ library, legal library and computer training room. A question and answer segment followed each presentation, which provided the groups with additional information from our team of highly skilled professionals.

An open house and public forums are just some of the events scheduled in the one-story conference center. Recently two reactive hydrocarbon presentations, entitled Baton Rouge Ozone: Cause and Effect, brought together industry, community, environmental groups, business leaders, government and elected officials. The center accommodates staff and the public in meeting rooms, a snack center and dining area.

For convenience, when visiting the Galvez, a parking garage is available across the street. This

Center - DEQ Environmental Scientist Jim Hazlett and Mike McDaniel, Baton Rouge Clean Air Coalition, explain to a group of area science teachers, how the Capitol air monitoring site functions.

seven-level structure provides parking for employees and visitors. A parking ticket is issued for access, and can be validated by appropriate personnel prior to departure. For safety and security, visitors must sign in at the security desk and present photo identification.

Please make a note of our new address and phone numbers. Address and telephone numbers for each DEQ office are available at www.deq.state.la.us.

When the opportunity presents itself, we extend an invitation to visit DEQ and the Galvez Building; our doors are always open!

Patty Birkett, DEQ Librarian, talks with members of LCA during their tour of the building. Birkett shared with them the many resources available in DEQ's library located on the first floor. The group requested to tour DEQ's new facility in the heart of downtown Baton Rouge.

A group of Nigerian government oil industry regulators with the Department of Petroleum Resources (DPR) along with officials from Chevron Texaco recently visited with DEQ officials with the Office of Environmental Services. The group discussed a variety of environmental issues relative to their industry.

Watching a demonstration of DEQ's new Make-A-Map technology in the GIS center, are members of LEAN, students and administrators from Tulane Environmental Law Clinic, members of the Governor's Task Force and several members from other local environmental groups. DEQ Secretary Hall Bohlinger (2nd from right) personally invited the groups to tour the building.

On a walking tour of the building, DEQ Secretary Hall Bohlinger visits with Alice Fredlund, DEQ Environmental Scientist Supervisor. Bohlinger spent a day talking with staff to see how they were adjusting to their new surroundings.

On The Front Lines–The Regional Offices

Southeast Regional Office

The Louisiana Department of Environmental Quality's (DEQ's) regional offices are on the front lines when it comes to dealing with environmental problems, inspections and the public in Louisiana. They are DEQ's best outreach to the citizens.

The Southeast Regional Office (SERO), located in New Orleans and Raceland, is one of DEQ's busiest offices, handling the 10 parishes of Washington, St. Tammany, St. John, St. Charles, Terrebonne, Lafourche, Orleans, Jefferson, Plaquemines and St Bernard. SERO has 49 staff members in the New Orleans office and eight at the Bayou Lafourche office in Raceland. For the fiscal year that ended June 30, 2003, the staff at SERO investigated 1,057 complaints and 1,507 releases, up 20 percent from the prior year. In addition, SERO conducted over 2,000 routine inspections required by law, grants and rules.

Mike Algero, Regional Manager, heads the SERO team and he is very proud of their work. "My staff is exceptional," Algero said. "They could work anywhere but they work here because they want to be here." There is a corkboard in the hallway of the office for good news. On it, Mike posts letters of commendation, thank you letters and emails from the citizens his staff have been able to help. Mike, who has been with DEQ for 14 years, has served in many different capacities. He has a Bachelor's of Science in Geology from Tulane University. As SERO Regional Manager for the last three years, Mike has organized a good system to meet the demands of his office.

Mike Algero, Regional Manager heads the SERO team.

Mike's staff consists of three technical staff members: Phil Frazier for air, Dwight Bradshaw for water and Mickey Drury for asbestos, lead, radiation and ambient air sites. These technical staff members help to train the field personnel in multi-media inspection techniques and routinely go on inspections with them. The New Orleans office has 36 staff members who respond to incidents and conduct inspections and the Raceland office has six. There are two full time emergency responders, Carol Petranek and Shawn Dearie who respond on alternate weeks, and a 10-member emergency response team that works the weekends and assists with large incidents such as train derailments and refinery fires. One of the goals SERO is working toward is having all inspectors trained in multi-media so that when they go on an inspection, they can check air, water, and solid and hazardous waste. "It would be a much more efficient use of manpower but we have to be sure our inspectors have the expertise," Algero said.

SERO has three supervisors, David Oge', Blaise Guzzardo and Don Brandin who manage 10 field personnel each, and between them they conduct the inspections in all ten parishes and respond to incidents (complaints, spills, releases, etc.) in seven of ten parishes. Incidents occurring in Orleans and St. Bernard parishes are handled by one workgroup. Those that occur in St. Charles and Plaquemines parishes are investigated by another workgroup and the third workgroup responds to incidents in Jefferson, St. Tammany and Washington parishes.

Pictured are employees of DEQ's Southeast Regional Office (SERO) located in New Orleans.

Each quarter the parish assignments are shifted so that there is a fresh perspective on the facilities in those parishes. The Bayou Lafourche office has one supervisor and six inspectors who inspect facilities in all 10 parishes and respond to incidents in St. John, Lafourche and Terrebonne parishes.

When a complaint or incident is reported, it is written up and given to the supervisor for the parish in which it occurred. The supervisor assigns an inspector to investigate and that inspector makes a visit or places a phone call to see what has happened. SERO has five working days to initiate a complaint investigation. When the investigation is completed, if the complaint has merit, it is sent to the Enforcement Division of DEQ in Baton Rouge for further action.

"What we are trying to do in the region, is to target inspections to the problem areas," said Algero. "We know where the problems are and each parish is different."

ACT 217 signed into law by Governor M. J. "Mike" Foster, may provide the flexibility that DEQ's

regional offices need in order to address problems as they arise.

The north shore, Washington and St. Tammany parishes have more water problems with waste treatment plants and sewage. In Orleans Parish, solid waste is the biggest problem. The New Orleans Business and Industrial District (NOBID), which stretches from the industrial canal east to the Orleans Parish line, over 7000 acres, has a severe problem with illegal and promiscuous dumping. In Jefferson Parish, landfills are a problem. The population is growing and expanding to the edge of the landfills, so there are complaints about odors. St. Charles and St. Bernard parishes have heavy industry and refineries so the problems in that area are usually related to air quality issues. With a variety of issues, inspections and problems, the staff of SERO remains busy all of the time.

SERO is fulfilling DEQ's mandate to protect the environment and citizens of Louisiana through hard work and conscientious professionalism. ♻️

Pictured are employees of DEQ's Bayou Lafourche office located in Raceland.

A Day in the Life...

of an Emergency Responder

A typical day in the life of Carol Petranek, Louisiana Department of Environmental Quality (DEQ) emergency responder, sure isn't dull and is anything but typical. Every day brings a separate set of challenges. Carol is one of two full time emergency responders for the Southeast Regional Office (SERO) of DEQ.

Carol, who has a Bachelor's of Science degree from the University of Louisiana at Lafayette with a major in Environmental Science/Renewable Resources, has been on the SERO staff for five years.

Last year, Carol responded to 180 incidents. What is an incident? It can be a complaint, a spill, release of toxic chemicals, a refinery fire, a train derailment or an overturned truck carrying hazardous materials. Approximately 60 percent of Carol's incidents were related to emergency response events and 40 percent involved complaints for underground storage tanks, air/asbestos releases and solid waste issues. Carol also conducts compliance evaluation inspections for air quality, underground storage tanks, asbestos demolitions/renovations and management plan reviews.

"This is by far the most interesting job I have ever had at DEQ," Carol said. "It keeps my brain rolling. It keeps me always on my toes and thinking. As an emergency responder, you have to pay attention. You have to really think - think about what are the consequences of your decisions."

Carol is highly trained in multi-media air/asbestos, hazardous and solid waste and underground storage tanks. In 2003, she took the following courses: Hazardous Material Technician Refresher, Advance Hazardous Materials Technician, Railcar Training, Asbestos Inspector and Supervisor, Lead Supervisor, Opacity Emissions and HAZWOPER training. The State Police, DEQ, EPA, the Coast Guard, Louisiana State University and other agencies conduct classes. "The courses taught by the State Police are hands on and physically demanding. I recommend it to any inspector who enjoys mental and physical challenges," Carol said. As a result of her training, Carol is called upon to investigate a wide variety of incidents.

This year Carol plans to focus on additional emergency response training courses and radiation courses related to transportation. The Federal Department of Homeland Security offers training to qualified people and Carol is anxious to take advantage of this special training. DEQ is providing valuable training in multi-media to all of its responders so they can respond in any type of emergency. DEQ also helps to train staff from other state agencies too.

Over the last year, Carol was involved with the LA State Police HAZMAT Training facility at Holden with their technician course. She lectured students about DEQ's air monitoring responsibilities with major incidents. "I discuss the hazards of going into an incident with an unknown or known contaminant(s) when they do not have the appropriate personal protection equipment. I tell them they must be patient and analyze every incident differently," Carol explained. "They must protect themselves. I

Carol Petranek, SERO emergency responder, and her colleagues on the front lines at a train derailment in the Vacherie area.

let them know that when I am on the scene I look out for everyone's well being. I show them the different types of air monitoring equipment that DEQ has available."

Carol wears many hats in her job including incident commander and advisor. Incidents at large plants, like the Murphy Oil fire, usually have an incident commander that is a member of the plant's staff. "They are familiar with their own system so we go in as an advisory capacity," Carol said. "They set up their own command post in one room with all the personnel there to work the incident - financial, medical, media, technical and others. These people stay in the room and delegate to others in the field. I watch and check to be sure that things are done correctly and advise them when they could be done better. I request that they correct the situation and they delegate it to be done. It's a good system."

For example, at Murphy, "I found approximately 1000 gallons of oil that was carried away from the Residual Oil Super

Extraction Unit (ROSE) by water utilized to extinguish the fire," Carol said. "The oil was at least three inches thick in some places and contaminated everything from soils, to building walls, utility poles, and gravel roadways. It was Murphy's responsibility to clean it up." Carol was called to respond to the Murphy Oil and Chalmette Refinery fires at 2 a.m. and put in a 30-hour day before she was through. The Murphy fire originated at the ROSE unit and the major focus at the beginning of the emergency was to extinguish the fire as quickly and safely as possible. DEQ's main job was conducting air monitoring. "As the lead inspector for DEQ, my first recommendation to Murphy's Incident Command was to hire a third party contractor licensed with DEQ to assist in air monitoring," Carol said. "Since Murphy is surrounded by residential homes, air-monitoring data had to be available immediately." Carol and 10 SERO inspectors conducted the air monitoring. "In these types of events, you need as many good people on your

side as possible," Carol continued. "There are so many things to think about, so many things happening simultaneously. You need a team and you need to be a team player."

Threat letters were found at the Murphy Oil incident, so the FBI was contacted. "I have met many members of the FBI Terrorist Task Force, but never had the opportunity to work with them so I was very curious about how they conduct investigations," Carol said.

At a recent spill, when a ship discharged 44,000 gallons of Xylene into the Mississippi at mile marker 181, three barrels were contained in a closed area. Carol responded with the Coast Guard, parish government and other DEQ inspectors from the SERO office. It was her call as to whether to clean up the spill or let it dissipate. Carol and other DEQ inspectors, who were performing air monitoring, determined that the clean up of the Xylene might endanger the workers.

"I was worried about putting workers in a gaseous environment with metal equipment (i.e. a boat) that could cause a static charge," Carol said. "I allowed the Xylene to dissipate. The water intake stations were notified of the spill. Every affected station sampled their water for contamination to be sure that there was no danger to the public's drinking water."

Carol plays a stronger advisor role in incidents such as an overturned 18-wheeler. Frequently, the owners of the truck don't know what to do and they need to know how to clean up the spill. "I help them make appropriate decisions and I explain the regulations with regards to their responsibilities."

Anyone responding to this kind of incident is required to have 40 hours of Hazardous Materials Technician training and OSHA HAZMAT training. Generally, DEQ, the State Police and fire department respond. They work together for the best outcome and respect each other's expertise and judgment. They generally concur on what needs to be done.

"We (Carol, the State Police HAZMAT officers and the fire departments) have a good friendship," Carol said. "They are my colleagues and I depend on them as much as they depend on me."

Carol Petranek is just one of many employees at DEQ that go the extra mile to be of service to the citizens of Louisiana and to be proficient at her job. ♻️

Carol Petranek, SERO emergency responder, takes a moment out of her hectic day to pose beside her DEQ emergency response vehicle.

Criminal Investigation Section Regroups: Polluters Beware

After a 10-month hiatus, the Louisiana Department of Environmental Quality's (DEQ) Criminal Investigation Section (CIS) has regrouped. The Section has been placed in the Office of the Secretary to emphasize the importance and attention that DEQ is placing on the enforcement of environmental laws and regulations. Not a new section for DEQ, CIS was originally formed in 1989 when the Louisiana State Police resources were refocused. In 2002, because of staffing shortages plaguing the DEQ Office of Environmental Compliance, the CIS was repositioned to assist with surveillance and enforcement activities.

During the early summer months of 2003, DEQ Secretary, Hall Bohlinger announced that the section would return on a full-time basis. That was a gratifying day for the Secretary and also for Peter Ricca, DEQ Environmental Manager of CIS. "The environmental statutes that govern [DEQ] allow us to investigate environmental crimes and other related matters," Ricca said. "Our job is to investigate, collect and gather evidence and to be expert witnesses and turn over our findings to a prosecutor who has the final say in the crime."

There are different categories of violations of the Louisiana Environmental Quality Act. An administrative or civil violation is an accidental or unintentional occurrence, a violation of a rule, policy or regulation that is punishable by fines or loss of authorizations. Most DEQ enforcement matters are handled through the administrative system, but there are times when violations can rise to the level of criminal activity. Environmental crimes are violations of a statute or law that is an intentional or negligent act. In other words, when a person willingly violates the statutes, permits and regulations of the Act they have committed an environmental crime. Criminal acts are punishable by fines and loss of freedom. Depending on the degree of the offense, an environmental crime can be either a felony or a misdemeanor. A felony, which is a major crime, includes a penalty of imprisonment for a year or more. A misdemeanor carries a penalty of less than a year in jail.

One of the important functions of CIS is to help build strong, prosecutable cases. Recently, Robert

Surveillance equipment used by the CIS is versatile and easily hidden. Pictured here an infrared imager, micro camera, wireless video recorder and a wireless surveillance camera with control panel.

Williamson of CIS, along with an agent of EPA, investigated a case that ended with a conviction of mail fraud and obstruction of justice.

CIS differs from the investigative arm of the Office of Environmental Compliance (OEC) in several ways. The OEC has inspectors whose activities of regulatory oversight allow them a "right to reasonable access." In other words, if a facility is permitted by DEQ, they are required to grant access to inspectors. CIS investigators, however, are bound by the rules of criminal law. If a facility is being criminally investigated, they are protected against self-incrimination. Criminal investigators do not have the "right to reasonable access" allowed to regulatory inspectors. Gathering evidence of an environmental crime requires a warrant or consent; without one of them, the investigator can rightfully be refused access.

The investigators who work in CIS are commissioned law enforcement officers who have successfully completed an accredited law enforcement academy and passed the Peace Officer Standardized Training (P.O.S.T.) standards. CIS investigators conduct interviews and interrogations, review documents, collect environmental samples, interpret results of chemical analyses, draft search warrants, appear as witnesses before grand juries, and testify at criminal and civil trials and administrative hearings. They are well versed in the stringent requirements for criminal prosecutions.

"We put together good cases [to turn over to the prosecutors.] We have had 79 pleas and only three trials and have collected more than \$2 million in fines since 1989."

There are presently five commissioned investigators who work for CIS. The intense training that investigators receive in the academy, as well as other venues, helps them to be proficient and professional in their jobs.

If you are aware of, or suspect an environmental crime, what do you do? DEQ maintains a hot-

line for the public to report environmental crimes and incidents. The number is 225-342-1234. How do you know when to call and what to report? If you have determined that a violation exists, have met, at a minimum, a level of "reasonable suspicion" of criminal activity or if there is a chance that the evidence may disappear, call and report it. CIS will investigate the complaint or call and if it is determined that a criminal violation may have occurred, notification will be given to the district attorney where the possible violation occurred. The criteria for a criminal case are:

- Environmental violations verified
- Potential exists for significant impact on public health, environment or DEQ program
- Includes answers to Who? What? When? Where? and How?
- Proper referral procedures are followed
- Statute of limitations has not expired

CIS investigates environmental crime but also spends time educating the public. The Section uses a diversified approach and canvassing type of effort to reach the public. Members of this section speak at town and council meetings and other venues to help the public understand how they can help CIS fulfill their mandate.

"We have a holistic view of what we are supposed to do," Ricca explained. "First and foremost, we investigate environmental crimes and provide support for prosecution. Second, we educate the public on environmental issues and crime. We teach them about reports, what evidence is and give safety classes."

CIS is part of an integrated system for catching and punishing environmental violators so that DEQ can better protect the citizens of Louisiana. "The whole purpose of CIS is to be a deterrent to environmental crimes," Ricca said.

Pictured - a vehicle tracking unit, electronic tools, equipment for aerial photography, a wireless black and white drop camera and a protective vest worn by investigators.

GEOGRAPHIC INFORMATION SYSTEM Unveils

In late July, the Louisiana Department of Environmental Quality (DEQ) became the first state environmental agency in the country to provide seamless, high-resolution statewide digital orthoimagery map-making technology to the general public.

The Make-A-Map web application provides access to historical geographic and environmental data sets from throughout the state and enables the public to obtain a visual understanding of their immediate surroundings.

Paul Zundel, Director of the GIS Center for the DEQ Information Technology Division said, "This technology gives people with different interests the ability to go online and create their own maps. If you are a citizen interested in obtaining information about an area where a new facility is being proposed, Make-A-Map can provide a detailed view of this facility's proposed site."

According to Zundel, the public will be able to access most DEQ data and relate it to a background map of numerous choices of imagery, as well as other data sets provided by federal, state and local

government entities. An additional benefit of this application will allow individuals involved in recreational sports such as hunting, fishing and boating to be able to view and create maps for their areas of interest using the same choices of imagery and overlay these maps with information such as highways, roads, rivers, streams and other types of data that will make the maps more meaningful to each individual.

Zundel was very excited with the technology, which was "a long time in the making." He explained that a command to create a map which in 1993 would take more than over 2 hours to process. The same request entered through the use of the Make-A-Map application will now take about 10 seconds.

The Make-A-Map application is the result of a combined effort by the DEQ GIS Center staff and members of the San Antonio Environmental Systems Research Institute (ESRI) staff working under contract. Using the ESRI Geographic Information Systems (GIS) software including, ArcGIS (the basic GIS software), ArcSDE (Spatial Data Engine) and ArcIMS (Internet Mapping Service) the Make-A-Map application creates, maintains and accesses data stored in an Oracle database.

The available data is a mix of DEQ internal data and other federal and state government agencies and includes raster and vector data layers. Raster layers include various satellite imagery mosaics of the State, aerial photography and USGS topographic maps. Some of the vector layer categories

available for use are census/demographics, geographic boundaries, geology, hydrology, map indexes, vegetation, transportation, water bodies and others.

Future plans for the Make-A-Map application include providing access to the general public to most data used at DEQ. Additionally, the Make-A-Map application will provide access to future satellite imagery and aerial photography of the State.

DEQ's Geographical Information System has been in place since 1992. The GIS Center provides mapping support to all personnel within DEQ. The Center also maintains and develops GIS data sets for agency mapping requirements. For further information on the Make-A-Map technology please visit <http://map.ldeq.org>.

"The GIS staff has worked very hard on developing this technology," said Zundel. "We are very proud to be able to offer this valuable service to the public."

Daniel Smith, DEQ GIS staff, gives a demonstration of the new GIS Make-A-Map technology to members of Louisiana Chemical Association during a tour of the building.

The New Look of CommSec

Our mission is to provide quick access to information and points of contact to meet the demands of a time-sensitive business.

In addition to a new logo and mission statement the Communications Section also welcomed a new director.

In mid-October, Rodney Mallett was hired — as the new Communication's Section Director. Mallett comes to the Louisiana Department of Environmental Quality (DEQ) after working the last 10 years at various writing, editing and public relations positions at *The Advocate*, Baton Rouge's daily newspaper.

Mallett, a native of Haughton, Louisiana, received his Bachelor of Arts from Louisiana State University in Shreveport and a Masters of Art in Communication from Northeast Louisiana University.

"I want to continue to help promote the positive work the agency has been doing. My goal is to work closely with staff of DEQ, members of media and stakeholders," Mallett said.

Because image is everything, CommSec realized the need for a logo and mission statement that clearly identifies its role. The logo encompasses the various media outlets known across the world, which include television, newspaper, radio and Internet. News does not stop and the same is true of CommSec, 24-hours a day, seven days a week, we stand ready and accessi-

ble to provide quick access to information and points of contact to meet the demands of a time-sensitive business.

We believe no media outlet is beyond our reach. The Section has aggressively worked to change media and public perception of the Agency, through positive communications, outreach programs, news conferences, campaigns and press releases.

"We want to make sure the residents of Louisiana know what kind of job DEQ is doing. I am looking forward to making new friends and developing strong working relationships while facing the challenges that lie ahead," stated Mallett.

Mallett produced numerous award-winning special sections for *The Advocate* and has been writing for newspaper publications for nearly 20 years.

For press releases, public alerts, media advisories and electronic versions of the Louisiana Environmental Update visit www.deq.state.la.us/news/.

Rodney Mallett, incoming Communications Director, receives the official inflatable Agency cell phone from DEQ Secretary Hall Bohlinger, and Analisa Mir, outgoing Communications Director.

The Important Part Surveillance Plays in Ozone and Air Quality Strategy

Air quality and ways to prevent ozone formation are a priority at the Louisiana Department of Environmental Quality (DEQ). Since Livingston, East Baton Rouge, West Baton Rouge, Ascension and Iberville parishes comprise the five-parish Baton Rouge nonattainment area, it is important that DEQ expend considerable effort in this region to educate the public through the ozone awareness campaign and to determine the best way to address the nonattainment area's ozone problems.

The Surveillance Division of the Office of Environmental Compliance (OEC), headed by Chris Roberie, Administrator, plays an integral part in the overall ambient air compliance strategy by collecting and servicing the air monitoring stations located across the state. Ozone is a criteria air pollutant, which has been a problem for the Baton Rouge area for a number of years and is typically a problem during the spring and summer months. This period of the year is commonly referred to as the ozone season and extends from May 1 to September 30.

Before May 1, the Quality Assurance Unit, comprised of an analyst and two environmental scientists, operating independently under the Assistant Secretary of the OEC, double check the air quality monitors located in the nonattainment area. Another safeguard that the Department has implemented is installing a secondary monitor at most sites. By having two monitors, the site operators are better able to locate a malfunctioning piece of equipment and to track ozone formation. Surveillance audits all the air monitoring sites, checks the primary, and where applicable, the secondary air monitors. Even though routine checks are made of all the monitors, this double check of the instrument calibration is important. Once all of the monitors have been checked they are routinely examined throughout the season.

"A special effort is made at the beginning of the season because we know we are at a critical time here in the Baton Rouge area," said Roberie. "The accuracy of our instruments is very important and mistakes can impact us severely."

The Surveillance Division's role does not end with the collection of ambient air data. When the nonattainment area experiences an exceedance of

A barbed wire fence protects expensive and sensitive equipment at the Capitol air-monitoring site. The monitors take air samples every 12 seconds and calculate the ozone level 24-hours a day, seven days a week.

the ozone standard, a special investigation is initiated as part of an overall effort to try and understand specific causes for the exceedance. Surveillance inspectors collect additional ambient air samples in special canisters designed for this purpose. A special review of records and company reports is made to determine if any emission report may indicate what might have contributed to the ozone problem.

Inspectors look at a number of factors that may have contributed to the exceedance, such as which way the wind is blowing and what facilities are up or downstream from the affected monitor site. There may be a barge that is being cleaned out and venting or a plant with unusual activity. The inspectors go to the facilities that might have had a release and look at their records, emission reports and operating logs. The inspectors intensely examine the timing, wind, atmospheric conditions and other factors for a period of time before and after the exceedance event in an effort to uncover any patterns of emissions or operations that may indicate a source of the problem. Information is shared with staff within the Department's Evaluation Division for further in-depth analysis and planning. These investigations are important to the Department in determining whether the present

State Implementation Plan (SIP) designed to attain the ozone standard is adequate.

"The push for a higher level of activity (investigating exceedances) has increased and the pressure to redirect resources to these 'for cause' type investigations is greater in the past few years," Roberie said.

The Surveillance Division conducts several kinds of inspections. Scheduled inspections are conducted as a matter of routine, when DEQ does not suspect any violations. "For cause" investigations are done when there is some reason to suspect that a violation may exist based on ambient data, a tip, complaint, source self-monitoring report or other information. Inspections are conducted for case development support and to gather additional evidence required. Follow-up inspections are conducted to determine if a facility is in compliance with the requirements of existing consent decrees or administrative orders.

The legislature passed and the Governor signed Act 217 that allows DEQ to implement a "compliance monitoring strategy designed to achieve meaningful environmental results." Under this Act "Inspections shall be both intensive, designed to accomplish meaningful environmental results and routine to ensure a compliance presence in the field."

"This (Act) will allow us to spend more time on 'for cause' investigations," Roberie said, "and less time counting beans. We can now develop a compliance monitoring strategy intended to focus resources on ongoing environmental problems. It will allow surveillance to target the areas in the environment that need the most attention and to achieve more "meaningful environmental results."

The ozone awareness campaign, Get In The KnowZone, and the care that goes into the monitoring system are good examples of the proactive way DEQ views its responsibilities in protecting the environment.

Scientific data shows that air quality has steadily improved over the last 30 years, including the Baton Rouge area. DEQ's mission and dedication is to continue making progress and positive strides throughout the state.

DEQ Blood Drive

*Give a little
so someone can live.*

Staff of the Blood Center draws blood from Jessica Vicknair, DEQ environmental scientist, while Teresa Edwards with DEQ recycling and litter section, sits cheering her on.

Bill Barber with DEQ Information Technology Division, gives blood every year and didn't want this year to be an exception.

This year's Blood Drive Queen, Curt Auzenne, DEQ recycling and litter section, walks the halls beseeching blood donors. He finds DEQ student workers, Tiffany Hooper and Chelsea Brown.

Miriam Tullier, DEQ Environmental Chemical Specialist, being interviewed on the topic of air quality by Jonnie Ruth Richey, a LSU senior majoring in communications.

A reporter from KPLC Channel 7 in Lake Charles interviews DEQ Deputy Secretary Bob Hannah after the Lake Area Industry Alliance (LAIC) press conference, announcing improvements in the air quality in Calcasieu parish.

DEQ in the News

Jean Kelly, DEQ Public Information Officer, and Pat Simon, host of the Morning Show on WAFB Channel 9, discuss how citizens in the five-parish nonattainment area can help reduce ozone formation as part of the We CAN (Clean the Air Now) campaign!

Ozone: 'Good up high, bad nearby'
Fourth violation in two years makes monitors' jobs important

Whitney Vann, 2une In Morning Show host for WBRZ Channel 2 interviewed DEQ Deputy Secretary Bob Hannah concerning the explosive ozone exceedances that occurred in early October.

Ken Pastorick, reporter for WBRZ Channel 2, spent some time with Jim Hazlett, DEQ Senior Environmental Scientist, learning about the air monitoring process at the Capitol site.

DEQ officials visited Simpson's Service Center, and spoke to South African federal government and EPA officials about changes to the vehicle inspection and maintenance program. EPA is encouraging other countries to phase out lead in their gasoline as part of the Clean Air Program.

At DEQ's Rock the Ozone, the concert for clean air, are WFMF Disc Jockey, Lauren Thom, DEQ employees that volunteered, Chris Carville, Admon McCastle, Patty Birkett, Dianne Denicola, Tiffany Dickerson and LSU student, Jennifer Hatch. Other DEQ employees that volunteered, but not pictured include Keiley Williams, Tiffany Hopper, and Chelsea Brown.

Louisiana Environmental Leadership Awards

The Louisiana Environmental Leadership Program (LaELP), a cooperative effort between the Louisiana Department of Environmental Quality (DEQ) and participating Louisiana facilities encourages voluntary pollution protection and environmental leadership around the state.

Participating companies are eligible to apply for recognition of their efforts through the Governor's Environmental Leadership Awards. A panel consisting of engineering consultants made recommendations for the Pollution Prevention Awards. A separate panel, consisting of two educators and a DEQ supervisor, made recommendations for the Environmental Community Outreach Awards. To be eligible, a facility must have no significant violations and there must be no significant unresolved compliance issues for three years.

On March 25, 2003, Governor M. J. "Mike" Foster recognized nine industrial and three municipal facilities for voluntarily implementing pollution prevention and community improvement projects for the year 2002. The awards were presented during the sixth annual Governor's Environmental Leadership Awards ceremony at the Louisiana State Capitol. "I applaud these recipients for their efforts to keep Louisiana environmentally protected," Governor Foster said. He also said that DEQ was "an agency funded last in the state, doing the best that it can."

DEQ Secretary Hall Bohlinger helped present the awards. He said the "importance of finding new and innovative concepts that provide long term environmental gain."

Accepting the award from Governor M.J."Mike" Foster, are Marathon Ashland Petroleum staff members Terry Persaud, Environmental Engineer, Nicole Brien, Environmental Coordinator, Rich Bedell, Louisiana Refinery Manager, and Wally Dows, Environmental and Safety Engineer, as Hall Bohlinger, DEQ Secretary looks on.

The recipients of the Environmental Leadership Awards for 2002 were:

Air Products and Chemicals, Inc.

St. Gabriel, Louisiana

BASF Corporation

Geismar, Louisiana

Chevron Oronite Company –

Oak Point Plant

Belle Chase, Louisiana

DuPont Dow Elastomers –

Ponchartrain Site

LaPlace, Louisiana

International Paper – Pineville Mill

Pineville, Louisiana

Marathon Ashland Petroleum

Garyville, Louisiana

Monsanto Company

Luling, Louisiana

Motiva Enterprises. LLC

Norco Refinery

Norco, Louisiana

Rubicon Inc.

Geismar, Louisiana

East Baton Rouge Recycling Office

Baton Rouge, Louisiana

General Motors Corporation –

Shreveport Assembly Plant

Shreveport, Louisiana

City of Shreveport

Department of Operational Services –

Office of Environmental Affairs

Shreveport, Louisiana

For more information on LaELP contact Gary Johnson at 225-219-3959 or visit www.deq.state.la.us/assistance/elp/index.htm

Permit Success Story

Louisiana Department of Environmental Quality's (DEQ) Office of Environmental Services (OES) recently celebrated the accomplishment of meeting a significant water permit issuance goal. The water permit writers and the support staff in OES' two divisions, the Permits Division and the Environmental Assistance Division, were treated to pizza, salad and cake by Assistant Secretary Linda Levy, Administrator Michael Vince, and Environmental Protection Agency (EPA) Region 6 NPDES Permits Branch Chief Jack Ferguson. Awards were given to permit writers who issued the most permits, to the Public Participation Group for their assistance in publishing all the public notices so quickly, and to the support staff who perform administrative reviews of water permit applications.

Staff of the permit division celebrate their hard work and efforts by enjoying pizza!

Together, the staffs of the two divisions worked to meet an interim milestone permit issuance rate that was agreed upon by DEQ and EPA earlier this year. This goal was one of the performance measures for DEQ's administration of the Louisiana Pollutant Discharge Elimination System (LPDES) program. The final permit issuance goal, due for completion by December 31, 2003, will put DEQ well on its way to attaining a permit issuance

DEQ Office of Environmental Services Assistant Secretary Linda Levy congratulates members of the Permits Division and Environmental Assistance Division who were responsible for meeting their interim permit issuance goal.

rate at a level necessary to address the LPDES permit backlog. "Reaching this goal was made possible by a fantastic group effort," said Linda Levy. "Everyone should feel proud of our success. The effort extends from permit writers to supervisors and managers, from support personnel to student workers. Everyone is responsible for our accomplishment."

DEQ is well on its way to meeting the final water permit issuance goal. 🗣️

Store Your Camp Memories
in A Star and Take Them With You
Wherever You Are

challenge

Snoop Dog, Mouth, Ms. Keeto, Pookie, Gumbo, Royal, Treble, Fresh, Frosty. All these names have one thing in common. They are the nicknames given to counselors by the children participating in a unique summer getaway experience called Camp Challenge. The weeklong retreat distinguishes itself from others because most of the 75 or so children that attend suffer from serious blood disorders.

This year marked the second consecutive return to the camp by the Louisiana Department of Environmental Quality's Recycling Section. They taught the kids how to have fun doing arts and crafts using recyclable materials.

The purpose is to provide the children and their siblings, who participate in the camp, an environment in which "they do not feel singled out or different than everyone else," said Cathy Allain, Camp Challenge Director also known as Treble by the kids. "To be treated like other kids who are not sick is really important," said Treble. Treble also said that it is equally important for the children's siblings to come along, so they too can spend the week "getting a lot of attention," because often healthy siblings of sick children may feel unnoticed.

Many of the kids, explained Treble, may experience hair-loss, swelling and other side effects due to their medication and treatment. "When they come here they have an opportunity to be among other kids in similar situations so they no longer feel like the odd-man out." Providing a sense of normalcy to the kids is part of the "challenge." Teaching the kids lessons for the future, such as environmental awareness through recycling and other activities, contributes to that.

In addition to the counselors, who use nicknames because it is easier for the children to remember, social workers and nurses are on call to provide support to the children, especially during trying circumstances such as the loss of a camp mate. "The support system lets the kids "tell themselves that is okay to feel the way they do. It allows them to go home and carry on. We tell them,

to store your camp memories in a star and take them with you wherever you are," said Treble.

Dr. Raj Warriar, Chief Oncologist at Children's Hospital in New Orleans, and others started Camp Challenge 16 years ago. They wanted to create a place for kids and their siblings because, according to Dr. Warriar, "cancer affects the whole family."

Using volunteer counselors, most of whom are former campers themselves, the camp creates a safe environment with which the kids' parents feel comfortable. "Every year more and more campers become staff," said Gumbo. Kids arrive at the camp at age six. Each counselor is assigned five kids. The ages of the kids range from six to 15. From age 15 to 17, kids have the option of becoming counselors in training, or CIT's. From age 17 up kid can become counselors. The rationale is that "it is easier to run a camp with people whose heart is in this place," said Pookie. "I came as a volunteer and never left," said Fresh.

Kids from all around the state come to Camp Challenge, where there is a different theme each year. This year's theme was "Vacation." The first day was "Island Festival," the second "Safari," so that every day of the week had a vacation motif attached. The DEQ visit arrived on "Disney Day."

Before lunch, DEQ conducted the arts and crafts classes. Part of the kids' daily exercise comes immediately after lunch.

They engage in several lively group dances such as the carwash, electric slide, and bunny hop. Afterwards the campers head to the FOB period, which stands for flat on back.

"One tends to think that it is sad to see kids facing such problems, but the truth is that after a few hours here, the kids are the ones that make you forget your own problems," said Karen Fisher-Brasher, DEQ Environmental Program Supervisor.

For more information on Camp Challenge visit www.campchallenge.org. 

"Dollars for Dru"

A Little Measure of Caring Goes a Long Way

Thanks to some hard work, support and contributions made by fellow DEQ staff, the "Dollars for Dru" campaign resulted in the Agency raising more than \$6,700 to assist Dru Boudreaux. Dru is a former DEQ executive secretary in the Office of Environmental Assessment in the Environmental Technology Division. On Labor Day 2002, she suffered spinal cord and brain injuries, along with burns to her face and right shoulder, in an automobile accident.

Unable to return to work, the road to and costs of recovery were difficult. The hearts and minds of many employees were with Dru during her ordeal. Elena Deiz, Minta Canelas, Steph Braden and Linda Brown thought the idea of a fund-raiser was the perfect answer to reflect the Agency's concern and willingness to assist a fellow coworker.

Dru with her former supervisor, Tim Knight. Tim presented Dru with the cash gift.

The "Dollars for Dru" effort consisted of several successful fund-raising activities, which included the sale of jambalaya plate dinners, baked items and a silent auction consisting of items donated by coworkers. Numerous employees rose to the challenge by volunteering their time and talents for the big event. Many prepared goodies for the bake sale, donated personal items for the silent auction and helped prepare plates for the jambalaya dinner sale. Larry Davis, one of the East Baton Rouge parish sheriff deputies assigned to DEQ, along with Chris Mayeux and Robert Nissen of DEQ cooked the jambalaya. Kevin Masden and Kirk Manuel, also of DEQ, cooked the white beans. Manuel donated all the ingredients for the white beans. All canned sodas along with the rolls were donated.

Dru is best described as a loving and kind person. She repeatedly stated, "I just can't believe that everyone did all this for me" to all that she talked with.

The event culminated with the cash gift being presented to Dru by her former supervisor, Tim Knight, Environmental Technology Division Administrator. Dru is currently in a nursing home facility receiving physical therapy. She is unable to return to work anytime soon, but she has vowed to one day come back to work with her friends at DEQ. 

Dru Boudreaux (center) with event organizer Mona Miller, Minta Canelas, and Elena Diez.

Countless DEQ employees volunteered to help make the jambalaya sale a success.

Legislative Session Brings Changes to DEQ

On March 1, 2003, Governor M.J. "Mike" Foster received *The Report of the Task Force In Response To Executive Order MJF 02-12*. It was based on a set of recommendations delivered to the Governor in draft form at the end of 2002. The final report was presented by the members of the Governor's Task Force on Funding and Efficiency of the Louisiana Department of Environmental Quality (DEQ). The subject matter covered in the draft report was how and where to improve the overall performance of DEQ. DEQ

HB 874 changed the existing law that authorized the Secretary of DEQ to enter into settlements of civil penalty assessments that allow respondents to perform beneficial environmental projects, also known as BEPs, or pay cash to the state, or both. The new law specifically allows settlements that require the respondents to pay money to the Central States Air Resources Agencies Association or to the Southern Environmental Enforcement Network, as long as such settlements require that CENSARA or SEEN utilize the money only for spec-

as defined by the federal Clean Air Act, or less than fifteen tons per year emitted of all such defined pollutants combined. In addition, the new law now specifically authorizes the Department to develop permits by rule for certain temporary air emissions of less than one hundred eighty days in duration and authorizes the department to develop rules and regulations providing for an expedited review process for permit applications with minor air emissions.

HB 694 created a new exemption from Public Records Act that mandated disclosure to the public for any records (or the information contained therein) held by public bodies "containing security procedures, criminal intelligence information pertaining to terrorist-related activity, or threat or vulnerability assessments created, collected, or obtained in the prevention of terrorist-related activity, including but not limited to physical security information, proprietary information, operational plans, and the analysis of such information, or internal security information," according to the bill.

SB 402 replaces the existing annual inspection requirement with requirement that DEQ develop a compliance monitoring strategy designed to "achieve meaningful environmental results." Methods should include a variety of tools including self-certifications, deviation reports, stack testing reports, discharge monitoring reports, semi-annual monitoring reports and on-site inspections. In addition, proposed law requires DEQ to promulgate regulations that provide for monitoring frequency based upon, facility compliance history, location of facility, potential environmental impact, operational practices being steady state or seasonal, any grant or funding commitments made by DEQ and any other relevant environmental, health or enforcement factors.

There were other laws enacted in a number of different areas during this year's regular session of the Louisiana State Legislature that kept DEQ professionals busier than normal. Some of these dealt with discharge and dumping issues, litter, reclaimed water, remediation, sewage treatment and water quality including ground water.

Secretary Bohlinger said the people of DEQ stand "ready and willing to implement any changes that will work to improve the service we provide to the public."

DEQ Assistant Secretary Linda Levy with the Office of Environmental Assistance, speaks with Representative Gary Beard during a break at this year's legislative session.

programs that exceed federal requirements were also contemplated.

Some of the recommendations made in the task force report called for changes in legislation. The instant the report hit the Governor's desk; the staff of DEQ began to get ready for what would be a very busy legislative session for the Department. The level of activity was even greater as the Department also tracked proposed legislation not related to the recommendations made by the task force.

Representatives from industry, state government and members of the legislature, environmental advocacy groups and public affairs groups formed the Governor's Task Force. In order to expedite the review and evaluation process, it was divided into two subcommittees. One addressed effectiveness and efficiency issues, the other reviewed funding issues. The effectiveness and efficiency subcommittee made six recommendations to improve the operations of the Department and the funding subcommittee provided 16.

"Putting the report together was a testament to the willingness of individuals at opposite sides of the spectrum to come together and work toward the common good," said DEQ Secretary Hall Bohlinger. "I think everyone involved in the process learned something and walked away with a renewed understanding of the intricacies involved in protecting the environment while at the same time promoting economic growth."

Most of the concerns brought forth by the effectiveness and efficiency subcommittee dealt with permit and enforcement issues. The approved House Bills 874, 545, 694 and Senate Bill 402 addressed a portion of these matters.

ified studies or other projects directly benefiting the state of Louisiana.

HB 545 provides that the Department, with certain limitations, shall not have any jurisdiction or authority with respect to permitting certain "minor" sources. The limitation on the department's authority is applicable to, among other things, sources that have facility-wide potential emissions less than five tons per year for each of any regulated air pollutant

DEQ Secretary, Hall Bohlinger; Louisiana Chemical Association (LCA) Environmental Affairs Director, Henry Graham; and DEQ Attorney Supervisor, Lou Buatt discuss pertinent issues during a committee hearing on the environment.

Brownfields Pilots Workshop

Interactive - Innovative - Informative

All across the state, sites for potential redevelopment lie idle. What could possibly become businesses, residential communities, recreational facilities and playgrounds are passed over by developers who see hurdles too great to overcome. These hurdles exist because often the piece of industrial or commercial property that is abandoned, idled or underused is often perceived as being contaminated. Properties conforming to these characteristics are called Brownfields.

Recognizing the need for increased economic development and realizing the importance of Brownfields redevelopment in this endeavor, the Louisiana Department of Environmental Quality (DEQ) developed a Brownfields program. The DEQ program seeks to bring back these types of properties into productive reuse to spark economic development, create jobs and increase tax revenues to benefit entire communities.

Since its inception in 1995, the national Brownfields initiative has grown into a proven, results-oriented program that has changed the way contaminated property is perceived, addressed and managed. Recently, DEQ partnered with the University of New Orleans Center for Brownfields Initiative (CBI) and the U.S. Environmental Protection Agency (EPA) to host the first Louisiana Brownfields Pilots Workshop. The purpose of the workshop was to provide information to assist local governmental agencies currently participating in DEQ's and EPA's Brownfields initiative. In Louisiana, there are 10 governmental agencies participating in the Brownfields pilot program and receiving funds from EPA Region 6. These are Baton Rouge, Gretna, Jefferson Parish, Monroe, New Orleans, Shreveport, South Central Planning and Development Commission, Southeastern Louisiana Regional Planning Commission, West Monroe and Westwego.

The agenda for the two-day workshop reflected relevant topics of importance as identified by Brownfields representatives in each of the pilot cities and it offered interactive, innovative and informative solutions to Brownfields pilots. One innovative topic

Mike Flores, with gcr & Associates, Inc., talked with the brownfields pilots about WebBRIMS (Brownfield Redevelopment Initiative Management System). This innovative and user-friendly database houses brownfields site-specific data in one central repository.

of discussion was WebBRIMS (Brownfields Redevelopment Initiative Management System). This user-friendly database houses Brownfields site-specific data in one central repository and it provides valuable inventory information on Louisiana Brownfields properties statewide to potential buyers, Realtors, lenders, public officials, and citizens alike.

Dr. James Brent, DEQ Assistant Secretary for the Office of Environmental Assessment, stated, "DEQ is actively promoting remediation initiatives that serve to clean up the environment and to revitalize abandoned properties. This event demonstrates the Agency's commitment to improv-

Alison Gibbs, Economic/Demographic Research Coordinator with the Office of the Planning Commission-City of East Baton Rouge was one of 35 attendees benefiting from the first Brownfields Pilot Workshop in Louisiana. Gibbs stated, "the workshop was definitely a good idea, it gave pilots a forum to share ideas and exchange information."

ing the environmental quality of the communities in which we live, work, and play. We hope that one of the results of the workshop will be to maintain the level of interest and commitment to the program that these pilots have so far demonstrated. Thanks to the vitality of the discussions, everyone left with a renewed sense of purpose and with a valuable opportunity to capitalize on what was presented."

Just a month after the workshop, EPA awarded Louisiana a total of four grants to promote redevelopment. The City of East Baton Rouge received three Brownfields grants for Brownfields assessment totaling \$400,000 and the West Monroe pilot received the fourth grant in the amount of \$200,000.

For additional information on Brownfields visit the DEQ website at www.deq.state.la.us/remediation/ias/vcp.htm.

Staff of DEQ at the Brownfields Pilot Workshop included back row, Dr. James Brent, Assistant Secretary Office of Environmental Assessment; Keith Casanova, Administrator Remediation Services; Lou Buatt, Attorney Supervisor; Duane Wilson, Brownfields Coordinator; front row, Leslie LeBaron, Environmental Scientist; Roger Gingles, Brownfields Coordinator and Tiffany Dickerson, Public Information Officer. DEQ On The Move

National recognition

Thomas Patterson, Deputy Undersecretary of the Office of Management and Finance, was presented the Henning Award by the American Academy of Certified Public Managers at their 15th annual Professional Development Conference in Charleston, S.C. The award was presented to Patterson for his career accomplishments, community service and contributions to state and national public manager organizations.

Admon McCastle reaches out

Admon McCastle, DEQ Community and Industry Relations, talks with teachers from Baker Middle School about establishing an environmental club.

Jim Hazlett on video

Renee Verma of Harris, DeVille & Associates interviews Jim Hazlett, DEQ Senior Environmental Scientist for an educational video for Shell/Motiva. The video will be used as an educational tool to increase citizen awareness in the Norco community.

Mary Gentry speaks

Mary Gentry, DEQ Source Water Assessment Program, speaks to attendees at the U.S. Environmental Protection Agency's Source Water Assessment Conference in Washington D.C.

ACS Records Management Analyst, Trang Verrett, and DEQ Public Information Officer, Tiffany Dickerson, at the Society of Environmental Journalists Conference in New Orleans. The theme was DEQ UNCENSORED.
